

CSC-382 Winter 2008

## **Assignment #8**

Due March 26, 2008

Recall our **next generation vending machine**.

For this assignment you should select classes from our ongoing list of possible class candidates. For the continued understanding of the requirements for this system you must develop the following:

- A. Develop two Use Cases for the vending machine
- B. Define a dependency diagram for this application
- C. Construct at least 2 sequence charts where you can use the above Use Cases to imagine some required sequence of object interactions. Note you will probably find some areas where you have not yet defined an object that will be required so simply add it to your ongoing list of objects.
